Office Action Summary

The following is a quotation of 35 U.S.C. § 103 which forms the basis for all obviousness rejections set forth in this Office action:

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Subject matter developed by another person, which qualifies as prior art only under subsection (f) or (g) of section 102 of this title, shall not preclude patentability under this section where the subject matter and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person.

Claims 2, and 5-11 and 26 are rejected under 35 U.S.C. § 103 as being unpatentable over Wolbarst in view of Coe (5305365). Wolbarst describes the characteristics of an x-ray mammograph and specifically teaches that they employ a molybdenum target (page 220) with a focal spot of .1 mm (page 197) and a minimum source-to-image distance of 40 cm (page 202). Coe teaches that a mammograph may be operated with a source-to-image distance of 76 cm, and with a magnification of 1.5 as recommended by Wolbarst (page 221), the source-to-object distance would be 50 cm. It is obvious that applicant's claims read on the Wolbarst mammograph with a focal spot size of .1mm (100 microns), SID of 76 cm and SIO of 50 cm.
